EDUCATION

Rice University **May 2025 (expected)**
Ph.D. Computational and Applied Mathematics Houston, TX
Advisors: Beatrice Riviere and David Fuentes

Rice University **May 2023**
M.A. Computational and Applied Mathematics Houston, TX
Advisors: Beatrice Riviere and David Fuentes
Thesis: *PocketNet: A Smaller Neural Network for Medical Image Analysis*
Overall GPA: 3.91/4.00

Rice University **May 2016**
B.A. Computational and Applied Mathematics Houston, TX
Overall GPA: 3.70/4.00

PROFESSIONAL EXPERIENCE

Google Research **June 2024 - Aug. 2024**
Research Intern, Advisor: Keerthana Natarajan San Francisco, CA

- Developed novel machine and deep learning-based algorithms for consumer health applications that improved upon existing internal and commercially available algorithms by as much as 15%.
- Created automated quality assessment tools for identifying noisy or problematic cases in a study that collected data from hundreds of runners, resulting in faster and more consistent quality assessment of data.
- Wrote a Python-based preprocessing library for data collected from runners that can be reused for other projects, resulting in faster development of consumer health-related products and algorithms.

TotalEnergies **May 2023 - Aug. 2023**
Research Intern, Advisor: Mauricio Araya-Polo Houston, TX

- Developed and published novel, state-of-the-art physics informed neural networks for the inversion of surface gravity data for CO₂ sequestration monitoring.
- Developed and published novel, state-of-the-art, deep learning-based methods for the joint inversion of seismic and surface gravity data for CO₂ sequestration monitoring.

TotalEnergies **May 2022 - Aug. 2022**
Research Intern, Advisor: Mauricio Araya-Polo Houston, TX

- Developed and published novel, state-of-the-art deep learning methods for the inversion of surface gravity data for CO₂ sequestration monitoring.

MD Anderson Cancer Center **Sept. 2020 - July 2021**
Research Assistant, Advisor: David Fuentes Houston, TX

- Developed novel, computationally efficient deep learning architectures for 3D medical image segmentation and classification.
- Created Docker images for containerizing complex neuroimaging analysis pipelines, allowing the work of previous researchers to be easily integrated into ongoing and future projects.
- Mentored two summer students through the Cancer Prevention & Research Institute of Texas (CPRIT)-CURE Summer Undergraduate Program.

U.S. Navy - USS Carl Vinson

Aug. 2016 - Aug. 2020

Information System Security Manager

San Diego, CA

- Led a team of 9 highly talented cybersecurity analysts who oversaw the security and integrity of a \$20,000,000 computer network consisting of roughly 4,000 assets with zero intrusions or major incidents.
- Implemented a comprehensive network security program that resulted in the organization's highest ever cybersecurity score when evaluated by external security auditors.
- Received extensive training on computer and communication networks, cryptographic key management, and computer network defense.

GRANTS & FELLOWSHIPS

National Defense Science & Engineering Fellowship

Sep. 2022 - Aug. 2025

Department of Defense

SOFTWARE

Medical Imaging Segmentation Toolkit (MIST)

The Medical Imaging Segmentation Toolkit (MIST) is a simple, scalable, and end-to-end framework for 3D medical imaging segmentation. The framework can seamlessly ingest various medical imaging data and is easily expandable to test new ideas (i.e., new architectures, loss functions, etc.). MIST is open source, written in Python for PyTorch, and available at <https://github.com/mist-medical/MIST>.
